

Dock Lift Safety

Speed-Lift / Unbeatable Safety Features

Superior Handling Equipment puts the safety of its **Speed-Lift dock lift** customers at the forefront. When designing and manufacturing each dock lift model, every process is approached from the user's point-of-view.

As such, every single **Speed-Lift dock lift** offers unbeatable safety features:

- **Speed-Lifts** come standard with **Automated Folding Ramps**, creating an enclosed platform for the operator, unique only to **Speed-Lifts** – increasing safety when compared to most scissor lifts.
- **Platform Railings** are permanently attached and covered with expanded metal mesh.
- **One-piece Bridge Construction** eliminates hazards to fingers and hands, unlike manual “throw-over” plates used by most scissor lifts and hydraulic ramp lifts.
- **Three-sided Lift Frame** and **Hinged Ramps** provide complete 360-degree toe and foot protection.
- **Speed Controls** are simultaneously **operational from either end** of the platform, on the ground, at the rear of a truck, or from a dock.
- **Seven Anchor Systems** for fixed-position truck stopping are available in addition to the standard crank-down stabilization jacks found on every **Speed-Lift dock lift**.
